### ABOUT ME

I'm a self-taught frontend developer with a passion for development that has never stopped growing. With web development, I've had the opportunity to learn and improve my skills as well as bring out my creative side.

Listed below are some of my projects that demonstrate my skills.

### EXPERIENCE

#### Your Notes v2 [\(live site\)](#)

- Based on an earlier version of a To-do app I had made, I designed this Notes and To-do app to provide a better UI/UX experience compared to its predecessor.
- Coding the application was a great opportunity to practice some advanced Vue.js skills and to integrate Firebase into the project to facilitate user authentication and persistence of user data.
- Uses Vuex state management library to handle application wide state.

#### Vue Movies [\(live site\)](#)

- A movie database application I designed and implemented to get some practice with the topics I was learning about Vue.js at the time.
- Users can search for movies and TV shows and receive suggestions based on their chosen category.
- Utilizes the TMDB API through Vue.js

#### The Frontend [\(live site\)](#)

- A project I designed and implemented in the format of a newspaper as a refresher on CSS Grid.
- As part of the 'headlines', the page lists some useful resources about programming in general.
- Uses HTML, SASS with CSS Grid and JavaScript.

#### Loopstudios [\(live site\)](#)

- A collaborative project I am particularly proud of since I had the opportunity to work with an amazing member of the Frontend Mentor community.
- After identifying a Frontend Mentor challenge that would best meet our needs, my partner-in-code and I implemented the Loopstudios landing page.
- This was a great opportunity to approach using Git and GitHub from a collaboration perspective as well as being a memorable learning experience.

### SKILLS

#### Programming Languages

HTML, CSS, SASS, Tailwind, JavaScript, PHP

#### Frameworks & Libraries

Vue, Vuex, Pinia, Webpack

#### Tools & Platforms

Git, GitHub, Firebase, VS Code

#### Design

Inkscape

### EDUCATION

#### Vue - The Complete Guide 2022

Udemy

The next great step I took after learning vanilla JavaScript was to dive into the world of frameworks.

By taking the 30hr+ course, I was able to learn how to use the latest version of Vue.js to build amazing applications.

#### JavaScript - The Complete Guide 2022

Udemy

This 50hr+ course taught me JavaScript from scratch, the most important programming language for web developers.

### INTERESTS

During my free time, I enjoy cycling, swimming, reading, and helping out on an animal farm.
